CARBON FILTER INSTALLATION GUIDE

The Litter-Robot is equipped with a Carbon Filter for absorbing odors and controlling moisture in the Waste Drawer. The flexible filter pad can be removed and replaced when cleaning the drawer.

For optimal odor control, we recommend changing the filter every three months. If you use scented litter, change the filter more frequently, as it will also absorb the fragrance.

Replacement Carbon Filters can be ordered at www.litter-robot.com.

INSTALLATION

Removal:

1. Pull out the Waste Drawer and locate the Carbon Filter in the front wall.
2. Push the top edge of the filter downward to free it from the hooks.
3. Pull the filter out of the slot and discard.

Installation:

1. In the front wall of the Waste Drawer, slide the new filter into the slot.
2. Bend the top edge of the filter and slide it under each hook.
3. Adjust the filter, so it covers the front-facing vent completely.

Properly installed Carbon Filter

Note: It is normal for the Carbon Filter to shed during installation. Simply wipe up or vacuum any debris.

Visit www.litter-robot.com for installation videos.
