

Litter-Robot 4 Cleaning Instructions

Cleaning the Globe

1. Press the Empty button to cycle the Globe clockwise, which will allow the litter to fall through the Waste Port and into the Waste Drawer for easy disposal. Sweep any leftover litter toward the Waste Port. Then, press either Cycle or Reset to return the Globe to the Home position. Ensure that all litter has been removed from the Globe—wet litter turns into messy clay!
2. Turn the Litter-Robot OFF and unplug the unit.
3. Open the Bonnet: Press and hold the buttons on both sides of the Bonnet, then lift and rotate the Bonnet to its open position.
4. Remove the Globe: Using the handle, lift the Globe off the Base.
5. Remove the Carbon Filter.
6. Clean the Globe with Litter-Robot cleaner spray or wipes, or with water and a mild soap. There are no electronic components in the Globe that can be damaged by soap and water. If the Globe has become extremely dirty, it can be soaked and cleaned with a water hose.
7. Let the Globe dry completely before reassembling it to the Base and closing the Bonnet (see page 27).

For a quick touch-up, you can use Litter-Robot cleaner wipes or a disposable towelette to wipe the inside and upper half of the Globe (without removing the litter). You can also manually rotate the Globe to a position where the litter is behind the screen, providing access to the Flexible Globe Liner surface for spot cleaning. The Litter-Robot can then be used almost immediately, since drying is nearly instantaneous.

Litter-Robot cleaner spray and wipes can be ordered at litter-robot.com

Cleaning the Waste Drawer

1. Pull the Waste Drawer out.
2. Clean the drawer with Litter-Robot cleaner spray or wipes or with soap and water.

Cleaning the Base

1. Never submerge, spray, or soak the Base or Control Panel. The Base and Control Panel contains sensors and electronics.
2. Wipe the surfaces of the Base with a cloth dampened with a disinfectant. If using a spray, spray away from the Base directly onto a cloth or paper towel, so disinfectant does not get on the electronics.
3. Do not use bleach

Reinstalling the Globe

1. Place the Globe on the Base in the approximate Home position. Holding the Globe by the handle and sliding it back into the Base will align it approximately in the Home position.
2. Ensure the back of the Globe is sitting flush in the rear bearing pocket and the gear track is engaged to the motor pinion.
3. Rotate the Bonnet downward with light pressure on the sides such that the Bonnet hugs the Globe. This will help to ensure proper alignment of the Bonnet latches to the Base. Push down on the Bonnet from the top and make sure the Bonnet has latched into place and the Bonnet is secure.

Note: The unit will not run without the Bonnet installed
